

1 Package mathml

1.1 Definitions for package mathml

mathml

[Function]

mathml (*expr*)
mathml (*expr*, *filename*)
mathml (*label*, *filename*)

Convert an expression to Presentation MathML (version 2).

When the first argument is a label, the label and its associated value are printed verbatim, not typeset as MathML.

When the optional argument *filename* is supplied, any output will be appended to the file.

load("mathml"); loads this package.

Examples:

```
(%i1) load ("mathml") $
(%i2) mathml (integrate (sin(x), x));
<math xmlns="http://www.w3.org/1998/Math/MathML"> <mo>-</mo>
  <mi>cos</mi> <mi>x</mi> </math>
(%o2)                                     false
(%i3) integrate (1/(1 + x^3), x);
                                     2 x - 1
                                     atan(-----)
                                     sqrt(3)
          2          log(x  - x + 1)          log(x + 1)
(%o3)  (- -----) + ----- + -----
          6          sqrt(3)          3

(%i4) mathml (%o3);
<pre>
(%O3) (-log(x^2-x+1)/6)+atan((2*x-1)/sqrt(3))/sqrt(3)+log(x+1)/3;
</pre>
(%o4)                                     (%o3)
(%i5) mathml (''%o3);

<math xmlns="http://www.w3.org/1998/Math/MathML"> <mo>-</mo>
